

CERTIFICATED OF ABSENCE: Phtalates and Bisphenol A

Declaración general sobre Ftalatos:

Phthalates, are omnipresent at various levels in our environment, with an annual production of 3 million tons, they are mainly used as plasticizers in plastics such as polyvinyl chloride (PVC) or epoxy resins.

For flexible packaging and specifically for BIB, there is no need for phthalates.

Plásticos Vicent certify that Phthalates are not "intentionally" added to any the raw materials and additives used to produce our products and are not intentionally added any stage of our production processes

Moreover, these molecules, are not subject to a regular control on our side - beyond verification of our supplier certificates that they are not intentionally added and that all materials supplied meet stringent EU food contact requirements

Declaración general sobre Bisfenol A (BPA):

Bisphenol A (Nº CAS: 80-05-7 5 , BPA), is a monomer used in the production of polycarbonate (PC) and epoxy resins.

These bags consist essentially of low density polyethylene (LDPE) for films, and, for the closure , of low density or high density polyethylene (LDPE, HDPE) and polypropylene (PP).

We certify that Bisphenol A is not "intentionally" added to any the raw materials and additives used to produce our products and are not intentionally added any stage of our production processes.

Moreover, these molecules, are not subject to a regular control on our side - beyond verification of our supplier certificates that they are not intentionally added and that all materials supplied meet stringent EU food contact requirements.
